Art Unit: 3744

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 8-28 drawn to multi-type air conditioner, classified in class 62, subclass 199.
- II. Claims 1-7 drawn to defrosting device, classified in class 62, subclass 277.

The inventions are distinct, each from the other because:

Inventions of Group I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination as recited in claim 7 can does not require the defrosting heat exchange means with one end connected to a pipeline for flow of high pressure gas refrigerant from a compressor and the other end connected to a pipeline connected to one end of an outdoor heat exchanger of the subcombination. The subcombination as recited in claim 1 has separate utility such as in a system that does not have plurality of indoor units each installed in a room and having an indoor heat exchanger and an electronic expansion valve of the combination.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and the

search for each group is not required for the other groups restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed.
